

Patient Passport

What is the Patient Passport?

The Patient Passport is a free, convenient, portable, user-friendly tool which is similar to a travel passport, but this one can be used by people (including those with chronic illnesses) as they 'travel' through the healthcare system.

This is a NextFifty funded pilot project in conjunction with UHealth, the Aspen Club (Community Health Improvement), Sharing the Care Campaign, and the Larimer Advance Care Planning team.

The passport includes:

- Any advance directives and/or MOST form
- Effective care strategies and personal preferences of those living with dementia.
- Medication list
- Important contact information

What should I do with this passport?

- Open and use information inside to help us better provide patient-centered care
- Pass on to the next healthcare team member to enable its continued use
- Return the passport back to the patient prior to discharge to next level of care

If you interact with a passport, please scan this QR code for a short survey to provide valuable feedback on this pilot project! We appreciate your time in sharing your experiences.

To scan a QR code with an iPhone, simply open camera and scan- your phone will prompt you to open the webpage. For android, download the QR reader from the Play Store.

For more education about how to use the passport, scan the QR code to the left or visit larimeradvancecare.org for contact information.
